

Introduction to Geographic Information Science

Lab 13

Christopher G. Prener, Ph.D.

Spring, 2016

Directions

This weeks lab is a continuation of work from last week using geoprocessing tools. Once you are done with both assignments below, submit a copy of your maps via email. This should be submitted by Wednesday, April 13th at 4:20pm.

1 Demographics for Colorado Counties

Complete “Assignment 6-1” (pp. 248-249.) in Gorr and Kurland (2013). Be sure to create a well formatted and laid out map using the skills we have been developing this semester. Be sure to select the **most appropriate** projected coordinate system for working with this extent of spatial data. You should also add an inset map showing the location of these counties in the context of the State of Colorado. **Do not worry about creating the Word document.**
